

How to choose the most appropriate microbiological specification for your product

right solutions.
right partner.

Whenever we work with a new client, one of the questions we are often asked is "what tests are required for my product and what are the acceptable and unacceptable limits for the tests?"

Choosing the correct specification and applying the most appropriate testing criteria for a particular product can lead to food safety issues if the most appropriate tests are not included, or conversely can be costly and waste time if some tests are unnecessary or inappropriate for the specific food matrix.

In this webinar we advise on how to pick the most appropriate specification and testing regime which gives value for money whilst meeting the appropriate legislative requirements and offering the required reassurance of food safety and product quality.

- Duration: 60 minutes including Q&A
- Speaker: Andy Muirhead - ALS Company Microbiologist
- Cost: 55€ + VAT (per person)
