

Shelf Life Testing, Predictive Modelling and Challenge Testing

right solutions.
right partner.

Shelf life testing, predictive modelling and challenge testing are all ways in which the potential for either spoilage organisms or pathogens to grow and produce sensory or food safety issues within a product over the course of the products shelf life is assessed.

This webinar looks at the difficulties in making an accurate prediction as to what microorganisms are likely to survive and grow within any product, and offers an explanation for the potentially anomalous results which can occasionally be seen in routine shelf life tests.

The webinar also looks at the benefits and disadvantages of predictive modelling, and with proposed new legislation potentially making challenge testing mandatory in *Listeria monocytogenes* risk assessments we discuss the “challenges” involved in challenge testing.

- Duration: 60 minutes including Q&A
- Speaker: Andy Muirhead - ALS Company Microbiologist
- Cost: 55€ + VAT (per person)
